

BOOSTER AMPLIFIER FOR CELLULAR TELEPHONE CRADLES

ABSTRACT OF THE DISCLOSURE

5 A booster amplifier that can be coupled to virtually
any cellular telephone handset is provided for use with
virtually any cellular communications network. The power
output of the booster amplifier is dynamically controlled
based upon signals received from the handset to improve
the quality and range of communications between the
handset and the base stations of the cellular network
10 without interfering with normal communications between
the cellular network and other handsets.
